

Godwill Atem

Cloud DevOps Engineer

6785164580

atemgodwill17@gmail.com

Atlanta, Georgia

7+ years of experience in Linux , DevOps and Cloud Technologies with result driven approach. Possess in-depth practical knowledge managing Linux and cloud based technology .Proven expertise in Automation, Build/Release Engineering and Software Deployment involving cloud computing platform like Amazon Web Services. Possesses in-depth knowledge in automation, configuration management and deployment of applications. Gained hands on experience in implementing concepts such as containerization, virtualization, version control, cloud computing, load balancing, by using a wide variety of technologies while working with operating Systems . Drives excellence in every project to deliver outstanding results. Experience with tools like Kubernetes and Docker for Orchestrating and deploying applications and services.

KEY SKILLS

- **Platforms:** Linux Centos 5,6 & 7 RHEL 5, 6 & 7, Ubuntu 18.04
- **Virtualization:** VMWare, Scripting: Bash shell·
- **Operating system:** Linux, Microsoft windows, MacOS
- **Containerization and Orchestration :** AWS EKS,ECS, ECR, Docker, Kubernetes.

Cloud Environment: Amazon Web Services (AWS)

Scripting Languages: Python, Shell and Bash Scripting, YAML

Databases: MySQL, MongoDB

Server Management: AWS, VMWare, ESX/ESXi.

Version Control Tools: Git and Github

Automation & Configuration Tools: Chef, Puppet, Ansible, Jenkins.

Infrastructure as code: Terraform, Cloud Formation.

Web server: Apache, Nginx

Ticketing and documentation: Jira, Confluence

Devops Engineer

Vision Media, Carlifonia (Feb '19 - July '22)

- Worked on major Projects setting up built and maintaining production ready applications running on kubernetes.
- Monitor and troubleshoot applications that are deployed on our kubernetes Dev, QA and Production clusters against zero downtime, perform periodic backups, and troubleshoot failures.
- Managed, deployed and troubleshoot applications that were running on kubernetes EKS clusters in our Dev, QA and Production environment.
- Provision aws services using terraform, create update and make changes to our terraform codes.
- Review git pull request and merging new releases to different branches.
- Automate deployments to Dev, QA and Production environments.
- Participate during cluster upgrades from different versions.
- Create S3 lifecycle policies to transition objects from one storage class to another.
- Setup CICD pipeline using jenkins which automates building of docker images, push them to ECR registries and deploy to different environments.
- Configure grafana dashboards to monitor CPU and memory usage of our applications and setup alerts through slack.
- Implemented production ready, load balanced, highly available, fault tolerant Kubernetes infrastructure. Configure Kubernetes EKS cluster on AWS and migrated application that were running on EC2 instances to EKS .
- Register domains and create route 53 records hosting various application servers.
- Customize Docker files for particular releases, build and push images to AWS ECR ,pull

images from ECR and deploy them to various environments.

- Configure and setup fluentd with kibana as centralised logging system
- Setup Monitoring system with prometheus and intergrate with grafana..
- Making changes to security groups to allow inbound and out bound traffic from other EC2 instances. Making changes to AWS services using terraform and cloud formation.
- Constantly troubleshooting failed deployments from Kubernetes pods. Updating configs to the pods and monitoring the application against zero downtime.
- Configured auto-scaling for our EKS clusters (horizontal pod auto-scaler and AWS auto-scaling).
- Built new code release using Jenkins, troubleshoot failed jobs, and escalated tickets to teams involve.
- Monitored, troubleshoot and made remarks on automated builds on our Jenkins pipeline for applications running on Dev, QA environments.
- Deployed new release of code using Jenkins. Participating in upgrades meetings.
- Made modification to Terraform codes and committed changes to our GitHub Terraform branch.
- Created Route 53 records hosting various application servers.
- Customized dockerfiles for particular releases ,built and pushed images to AWS ECR, pulled images from ECR and deployed them to various environments.
- Communicate with the customers and other teams during planning, scheduling and implementation.

Cloud Devops Engineer

Napco Media, Pennsylvania (Jan '18 - Sep '19)

- Worked on major CICD projects setting up pipelines using Jenkins.
- Monitor Our infrastructure against zero downtime.

- Move docker images from old to new ECR repositories ,update configs of all deployments and push changes to github.
- Update kubernetes api version on deployment charts from version 1.19 to version 1.21.
- Editing of bash scripts to and making changes with code commit,branches,pushing and pulling using git/github. Daily troubleshooting tickets from and responding to incidence on user accounts.
- Modified and created nodegroup stacks (EKS nodes) on Cloudformation.
- Made changes to security groups to allow inbound and out bound traffic from other EC2 instances.
- Made changes to AWS services using Terraform and Cloudformation.
- Constantly troubleshooting failed deployments of kubernetes pods. Updated configurations to pods and monitored the application against zero downtime and deployed them using ansible playbooks to production EC2 servers.
- Participated in daily scrum meetings to address various DevOps and customer related issues. Deployed and tested various versions of the code and escalated issues to appropriate team.
- Monitored our applications using Prometheus and Grafana.
- Created AMI after deploying new codes to EC2 instances and changed launch configurations on auto-scaling group using Terraform.
- Performed rolling updates to the cluster when major changes are made which require a restart of instances or pods.
- Configure and update auto-scaling groups depending on client request.
- Established multiple continuous deployment processes and advised on the best practices.
- Participated in a major project that require setting up AWS EKS to run applications in production environment. The project involved creating two EKS clusters in different availability zones.
- Pushed docker images to AWS ECR and Pulled particular versions when rollback is needed.
- Optimized cost through reserved instances, selecting and changing of EC2 instance types based

on resource needs, S3 storage classes and S3 life cycle policies etc.

- Created S3 buckets and managed policies using IAM for S3 buckets and used S3 Bucket and Glacier for storing historical data.

AWS Solution Architect

Marriott International Hotels, Remote (Jun '15 – Nov '17)

- Implemented projects that refactored environments' IaC templates, which eliminated hard coding, promoted re-useable templates, reduced errors, and vulnerabilities in the environments.
- Wrote configuration code to provision solutions with Ansible, CloudFormation, and Terraform in different environments, leveraging well-architected tools and best practices to building secure, high performing, resilient, and efficient infrastructures based on operational excellence, security, reliability, performance efficiency, cost-effective environments.
- Executed Organizational Units, Nested OUs, leveraging SCPs and IAM Policies, and Detective Guardrails to eliminate breaks in the environments.
- Demonstrated experience in systems and cloud network design and implementation that promotes scalable, secured, and fault tolerant environments.
- Managed configuration of remote state file using Amazon S3 and DynamoDB.
- Provisioned AWS Landing Zones to create a customized baseline of AWS accounts
- Experience integrating with native AWS services (CodePipeline, CodeCommit, CodeBuild, CodeDeploy, EC2, EKS, ECR, S3).
- Built and managed Jenkins open-source automation server to deploy CodeBuild artifacts with CodeDeploy and constructed several functioning CI/CD Pipelines.
- Enabled Cloud Trail log file validation so that any changes made to the log file itself after it has been delivered to the S3 bucket is trackable to ensure log file integrity.
- Enabled access logging for Cloud Trail S3 bucket so that you can track access requests and identify potentially unauthorized or unwarranted access attempts.

- Enabled Cloud Trail across all geographical regions and AWS services to prevent activity monitoring gaps.
- Encrypted highly sensitive data such as protected identifiable information (PII).
- Developed strategies for modernization of existing systems and migration into a cloud environment using AWS Migration Hub, AWS Server Migration Service, and AWS Database Migration Service.
- Orchestrated cloud governance, authorization, authentication, and identity access management of the clients' entire cloud environment using AWS IAM services (IAM users, IAM groups, IAM Roles, IAM Policies, identity federation) AWS organization, AWS Single Sign-On.
- Designed, Deployed, managed, and operated scalable, highly available, and fault-tolerant systems on AWS Cloud
- Experience in deploying and monitoring applications on various platforms using Elastic Beanstalk, setting up the life cycle policies to back the data from AWS S3 to AWS Glacier
- Configured CloudWatch alarm rules for operational and performance and performance metrics for AWS resources and applications
- Effected AWS Cloud cost-effective solution in non-prod environments using instance scheduler.

EDUCATION

- Bsc Computer Science (Jan '11 - Jun '14) University of Buea

CERTIFICATIONS / TRAINING

- AWS Certified Solutions Associate (May '21 - May -23)
- Docker Certificate of Completion
- Kubernetes Certificate of completion
