

GODWILL ATEM

SRE/DEVOPS ENGINEER

Email: atemgodwill57@gmail.com | Phone: +1 (678) 516-4580

Professional Summary:

Dynamic DevOps Engineer / Site Reliability Engineer (SRE) bringing over 8 years of experience in coding and bug resolution using source control tools. Expert in crafting, testing, and deploying robust infrastructure and applications for a diverse clientele. Proficient in a wide array of DevOps tools and technologies, including Git, GitHub, Jenkins, Concourse, Docker, Kubernetes, ArgoCD, Terraform, Ansible, Chef, Python, Bash, Shell, and JavaScript. Skilled in automating deployments and streamlining workflows to ensure high availability and optimal performance of production systems. Strong command of cloud platforms such as AWS, Azure, and Google Cloud. Recognized for quick problem-solving capabilities and a collaborative approach, fostering effective teamwork in fast-paced environments.

Technical Skills:

DevOps Tools: Git, GitHub, GitLab, Jenkins, Concourse, ArgoCD, Docker, Kubernetes, Terraform, Ansible, Chef, Puppet

Programming Languages: Python, Bash, Shell, JavaScript, YAML

Cloud Platforms: AWS (EKS, ECS, ECR), Azure, Google Cloud

Containerization & Orchestration: Docker, Kubernetes, OpenShift, Helm

Monitoring & Logging: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), Splunk, Nagios, CloudWatch, CloudTrail

Collaboration & Project Management: Trello, Slack, JIRA, Confluence, Asana, Microsoft Teams

Infrastructure as Code: Terraform, CloudFormation

Operating Systems: Linux (CentOS, RHEL, Ubuntu), Microsoft Windows, macOS

Databases: MySQL, MongoDB, DynamoDB

Continuous Integration & Deployment: Argo CD, Jenkins, Travis CI, Concourse

Build & Unit Testing: Maven, SonarQube, Safe-Script

Web Servers: Apache, Nginx

Ticketing & Documentation: JIRA, Confluence

Automation & Configuration: Chef, Puppet, Ansible

Monitoring & Visualization: Grafana, Prometheus, Elasticsearch, Splunk

Education:

Bachelors of Science in Computer Science

University of Buea, Cameroon

June 2014

Certifications:

AWS Certified Solution Architect- Associate

Validation number: AWS Certified Solutions Architect - Associate

Aug 2024 - Aug 2027

Docker Certificate of Completion

Kubernetes certification of Completion

Professional Experience:

Intel || Santa Clara, CA

Oct 2023 – Present

Site Reliability Engineer/DevOps Engineer

Responsibilities:

- Implemented container orchestration strategies using OpenShift, enhancing deployment scalability and resource utilization across development environments.
- Led the integration of AWS services, including EKS and ECS, to optimize cloud infrastructure for various applications, ensuring seamless performance and reliability.
- Developed comprehensive documentation and runbooks for operational processes, facilitating knowledge transfer and improving team collaboration.
- Managed Kubernetes clusters for over 50 microservices, ensuring high availability and reliability with 99.99% uptime.

- Automated infrastructure provisioning using Terraform, decreasing manual setup time by 40% and improving resource management efficiency.
- Developed and maintained monitoring solutions with Prometheus and Grafana, enabling proactive system performance insights and reducing incident response times by 25%.
- Configured and maintained web servers (Apache, Nginx) to host applications securely, focusing on performance tuning and security hardening.
- Collaborated closely with software development teams to ensure seamless integration of DevOps practices, fostering a culture of continuous improvement and collaboration.
- Managed ticketing and issue tracking through JIRA and Confluence, ensuring efficient resolution of operational challenges and maintaining clear communication within teams.
- Conducted regular disaster recovery drills and implemented backup strategies to enhance system resilience and data integrity in critical applications.
- Designed and implemented CI/CD pipelines using Jenkins and ArgoCD, resulting in a 30% reduction in deployment times across multiple projects.

Comcast || Philadelphia, PA

Aug 2022 – Oct 2023

Site Reliability Engineer/DevOps Engineer

Responsibilities:

- Led the implementation and management of OpenShift container orchestration platform, resulting in improvement in application deployment efficiency.
- Collaborated with development teams to design and implement CI/CD pipelines for seamless application delivery on OpenShift clusters.
- Conducted regular performance analysis and capacity planning to ensure optimal resource utilization and scalability of the infrastructure. Designed and implemented infrastructure-as-code using Terraform to automate the creation of AWS resources for various projects.
- Architected solutions that leverage AWS Lambda's event-driven model, integrating with services like API Gateway, CloudFormation, S3, DynamoDB, and others.
- Spearheaded the Splunk implementation, configuration, and optimization to ensure efficient log management and monitoring across the organization.
- Implement and manage Dynatrace and Sumo Logic monitoring solutions for critical applications, ensuring real-time visibility into performance and reliability metrics.
- Collaborate with cross-functional teams to define and implement best practices for application and infrastructure monitoring, incident response, and capacity planning.
- Developed and maintained infrastructure as code using Terraform, ensuring consistency and repeatability across environments.
- Orchestrated CI/CD pipelines using Git, Jenkins, and GitOps model, enhancing deployment efficiency.
- Architected a three-tier application using Terraform.
- Made modifications to Terraform codes and committed changes to our GitHub Terraform branch.

Vision Media || Valencia, CA

Oct 2019 - Jul 2022

Site Reliability Engineer / DevOps Engineer

Responsibilities:

- Administered complex Active Directory and IAM controls, ensuring robust security measures.
- Implemented and managed monitoring solutions, including Prometheus, Splunk, and Dynatrace, for proactive issue identification and resolution.
- Developed and maintained monitoring solutions for infrastructure components, utilizing tools such as Grafana, Prometheus, and Splunk.
- Utilized Python, Ansible, and shell scripting for automation and configuration management.
- Conducted system administration tasks for both Linux and Windows operating systems.
- Worked on major Projects setting up built and maintaining production ready applications running on Kubernetes.
- Implemented Dynatrace monitoring for a diverse range of applications, enabling the team to identify and resolve performance issues proactively.
- Monitor and troubleshoot applications that are deployed on our Kubernetes Dev, QA and Production clusters against zero downtime, perform periodic backups, and troubleshoot failures.

- Managed, deployed and troubleshoot applications that were running on Kubernetes EKS clusters in our Dev, QA and Production environment.
- Managed the deployment and scaling of applications in AWS using tools such as CloudFormation, and ECS.
- Automated infrastructure management tasks using scripts written in Python and Bash - Developed and maintained Chef cookbooks to manage the configuration of servers and applications.
- Implemented monitoring solutions using Nagios, Prometheus, Grafana, Cloud trail and CloudWatch to detect and resolve issues proactively.
- Managed UNIX server environments, including configuration, installation, and maintenance.
- Managed and maintained multiple OpenShift clusters, ensuring high availability and performance of critical applications.

Napco Media || Philadelphia, PA
Cloud DevOps Engineer

Jan 2018 - Sept 2019

Responsibilities:

- Worked on major CICD projects setting up pipelines using Jenkins.
- Move docker images from old to new ECR repositories, update configs of all deployments and push changes to GitHub.
- Update Kubernetes API version on deployment charts from version 1.19 to version 1.2.
- Making changes with code commit, branches, pushing and pulling using Git/GitHub
- Modified and created node group stacks (EKS nodes) on Terraform.
- Made changes to security groups to allow inbound and outbound traffic from other EC2 instances.
- Made changes to AWS services using Terraform.
- Constantly troubleshooting failed deployments of Kubernetes pods
- Updated configurations of pods and monitored the application against zero downtime and deployed them using ansible playbooks to production EC2 servers.
- Participated in daily scrum meetings to address various DevOps and customer related issues.
- Monitored our applications using Prometheus and Grafana
- Created AMI after deploying new codes to EC2 instances and changed launch configurations on auto- scaling group using Terraform.
- Participated in a major project that required setting up AWS EKS to run applications in production environment.
- The project involved creating two EKS clusters in different availability zones.
- Pushed docker images to AWS ECR and Pulled versions when rollback is needed.
- Optimized cost through reserved instances, selecting and changing of EC2 instance types based on resource needs, S3 storage classes and S3 life cycle policies etc.
- Created S3 buckets and managed policies using IAM for S3 buckets and used S3 Bucket and Glacier for storing historical data.

Marriott International Hotels || Atlanta, GA
AWS Solution Architect/ Site Reliability Engineer

Jun 2015 - Nov 2017

Project Description: *AWS Cloud Migration and Optimization for Web Application*

Responsibilities:

- Implemented projects that refactored environments' IaC templates, which eliminated hard coding, promoted re-useable templates, reduced errors, and vulnerabilities in the environments.
- Wrote configuration code to provision solutions with Ansible and Terraform in different environments, leveraging well-architected tools and best practices to building secure, high performing, resilient, and efficient infrastructures based on operational excellence, security, reliability, performance efficiency, cost-effective environments.
- Managed configuration of remote state file using Amazon S3 and DynamoDB
- Provisioned AWS Landing Zones to create a customized baseline of AWS accounts - Experience integrating with native AWS services (Lambda, Code Pipeline, Code Commit, Code Build, Code Deploy, EC2, EKS, ECR, S3)
- Enabled Cloud Trail log file validation so that any changes made to the log file itself after it has been delivered

to the S3 bucket is trackable to ensure log file integrity.

- Enabled access logging for Cloud Trail S3 bucket so that you can track access requests and identify potentially unauthorized or unwarranted access attempts.
- Enabled Cloud Trail across all geographical regions and AWS services to prevent activity monitoring gaps.
- Encrypted highly sensitive data such as protected identifiable information (PII)
- Developed strategies for modernization of existing systems and migration into a cloud environment using AWS Migration Hub, AWS Server Migration Service, and AWS Database Migration Service
- Orchestrated Cloud Governance, authorization, authentication, and identity access management of the clients' entire Cloud environment using AWS IAM services (IAM users, IAM groups, IAM Roles, IAM Policies, identity federation) AWS organization, AWS Single Sign-On
- Experience in deploying and monitoring applications on various platforms using Elastic Beanstalk, setting up the life cycle policies to back the data from AWS S3 to AWS Glacier
